## **DETAILED ACTION**

### ***Response to Amendment***

1. Applicant's submittal of an amendment was received on February 9, 2004, wherein claims 1-2, 5, 9 and 11-13 were amended and claims 3 and 16-18 were cancelled.

### **EXAMINER'S AMENDMENT**

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Nickolas Westman on March 24, 2004.

The application has been amended as follows:

#### **IN THE CLAIMS:**

In claim 1, line 10, the word "bracket" has been replaced with the word --panel-- to correct a 112 2<sup>nd</sup> paragraph error in the claim.

Claim 2 has been replaced by the following:

2. The actuator panel of claim 1, wherein the powered machine is self-propelled, and said control controls movement of the frame in a rearward direction of movement, the actuator panel being mounted at a rear of the powered machine.

*Allowable Subject Matter*

3. Claims 1-2 and 4-15 are allowed over the prior art.
4. The following is an examiner's statement of reasons for allowance: claim 1 was amended to incorporate the adjustable actuator of claim 3. The prior art does not disclose wherein the actuator panel bracket is adjustably mounted on the actuator panel (See Figure 4, where the bracket is adjustably mounted to the actuator panel).

Regarding claim 5, the prior art (specifically Keagle et al.) did not disclose wherein the control lever is mounted on a valve block, an actuator spool in said valve block and said actuator spool being linearly moveable and having a portion pivotally mounted to the lever at a second pivot spaced from the pivot of the lever to the valve block, the control lever including an actuator rod extending in a direction toward the pivoting actuator panel.

Regarding claim 11, the prior art (specifically Keagle et al.) did not disclose a hydraulic control valve block on the machine and having sliding valves with actuator levers pivoted relative to the valve block, wherein a return member extending outwardly from each of the levers and swinging in an arc as the respective actuator levers are moved to move the sliding valves (therefore, the levers are thus actually mounted onto the valve block). The Keagle reference does not disclose the use of a return on the levers that are pivotally mounted onto a valve block, and wherein the levers have a return member or projection that extends outwardly from the levers and is engaged by the pivoting panel.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
